

JUAN ESTEBAN RESTREPO OSSA

PROFESSIONAL PROFILE

Systems Engineer with B1 English proficiency and 9 years of experience leading Cloud and On-Premises infrastructure administration, specializing in cybersecurity, Linux and Windows platforms, AWS, Azure, VMware, virtualization, and infrastructure automation. Experienced in designing, implementing, and optimizing high-availability solutions, network administration, firewalls, Active Directory, Microsoft 365, Docker, Infrastructure as Code (IaC), monitoring, vulnerability management, business continuity, and ITIL best practices. Additionally, has 3 years of experience in backend and frontend development using JavaScript, PHP, Node.js, Vue.js, and React. Focused on digital transformation, continuous improvement, and technical leadership in technology projects.

PROFESSIONAL EXPERIENCE

Infrastructure Lead – Psicol S.A.S.

07/2022 – 06/2026

- Led the administration of Cloud and On-Premises infrastructure across Linux, Windows, AWS, and VMware environments, supporting 8 IT projects and more than 10 servers while maintaining over 99.9% availability of critical services.
- Strengthened the organization's cybersecurity posture through system hardening, vulnerability management, SIEM, XDR, corporate firewalls, and network segmentation, remediating more than 50 critical and high-severity vulnerabilities and over 80 medium and low-severity vulnerabilities, significantly reducing the attack surface.
- Automated infrastructure processes using Infrastructure as Code (IaC) and automation tools, reducing deployment times by 15% and operational errors by 20%.
- Designed and implemented centralized monitoring with Grafana for more than 10 servers and 50 critical applications, improving observability and reducing incident detection time by 15%.
- Administered Microsoft 365 and Active Directory for more than 40 users, managing Exchange Online, Group Policy (GPO), licensing, and Multi-Factor Authentication (MFA), strengthening identity management and security.
- Managed enterprise network infrastructure by implementing more than 80 firewall rules, 20 VPN tunnels, and network segmentation policies, enhancing perimeter security and ensuring secure communications between company sites.
- Implemented backup and disaster recovery strategies using NAS storage, while enhancing web service security through SSL/TLS certificate management to ensure data protection and service availability.
- Administered Development, QA, and Production environments for more than 50 applications, supporting deployments on Apache, Nginx, Docker, and Docker Compose, optimizing databases, and integrating systems through REST APIs, ensuring stability and business continuity.
- Led two infrastructure and service migration projects to Cloud platforms, reducing downtime while improving scalability and service availability.
- Coordinated infrastructure and telecommunications vendors, ensuring SLA compliance, service continuity, and the successful delivery of technology projects.
- Managed critical incidents following ITIL best practices, conducting Root Cause Analysis (RCA) and reducing the recurrence of infrastructure-related service failures.

LANGUAGES

Spanish: Native

English: B1 (Intermediate)

TECHNICAL SKILLS

- Cloud Computing: AWS, Azure
- IT Infrastructure & Virtualization: VMware, Hyper-V
- Cybersecurity: SIEM/XDR, Vulnerability Management, System Hardening
- Linux & Windows System Administration
- Microsoft Office
- Identity and Access Management (IAM): Active Directory, AWS IAM, Multi-Factor Authentication (MFA), Data Loss Prevention (DLP)
- Containers & DevOps: Docker, Git, CI/CD
- Monitoring & Observability: Grafana, Zabbix
- Relational Databases: MySQL, MariaDB
- Backend Development: PHP, Laravel, Node.js, Express.js

- Administered an IT infrastructure consisting of 8 physical and virtual servers running Windows Server, VMware, and Hyper-V, ensuring high availability and business continuity of corporate services.
- Administered relational databases, optimizing queries and processes to improve the stability and performance of critical applications used by more than 200 users.
- Managed Active Directory, DNS, and DHCP services for over 200 users and 200 endpoints, strengthening centralized identity management and ensuring the availability of corporate network services.
- Administered LAN/WAN network infrastructure and perimeter security by implementing network configurations and access policies that ensured secure connectivity and stable communications between corporate locations.
- Implemented security policies and managed the corporate antivirus solution across more than 200 endpoints, strengthening endpoint protection and reducing malware-related incidents and unauthorized access.
- Participated in security audits and vulnerability management initiatives, contributing to the identification and remediation of more than 20 security findings to improve compliance with corporate security policies.
- Automated administrative and operational tasks using PowerShell, improving the efficiency of repetitive processes and reducing execution times by approximately 15%.
- Provided Level 2 (L2) technical support for infrastructure and enterprise platforms, managing incidents and service requests following ITIL best practices and contributing to SLA compliance.
- Performed server and database backup and recovery operations, supporting business continuity and ensuring the protection of corporate data.

EDUCATION

Bachelor's Degree in Systems Engineering – Institución Universitaria de Envigado, 2025

Technical Diploma in Computer Analysis and Programming – CENSA, 2018

COURSES AND CERTIFICATIONS

Agile Methodologies – Universidad Católica de Oriente (40 hours)

AWS Certified Solutions Architect – Associate – Udemy (30 hours)

Introduction to Cybersecurity – Cisco

Databases: Fundamentals and SQL – SENA (40 hours)

React Native (Basic and Practical) – Platzi (38 hours)

JavaScript (Basic and Practical) – Platzi (38 hours)

Software Development Quality – SENA (40 hours)

Databases: Fundamentals and SQL (DDL & DML) – SENA (40 hours)
